DETAILED ACTION

Continued Examination Under 37 CFR 1.114

1. A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after final rejection. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, the finality of the previous Office action has been withdrawn pursuant to 37 CFR 1.114. Applicant's submission filed on 13 September 2007 has been entered.

Claim Objections

2. Claim 15 is objected to because of the following informalities: stop means "(32, 42)" in lines 4 and 7 should be "stop means (34, 42)". Appropriate correction is required.

Claim Rejections - 35 USC § 102

3. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

4. Claims 1-26, 28 and 29 are rejected under 35 U.S.C. 102(b) as being clearly anticipated by Rudolf et al (EP 0 973 353). Rudolf et al discloses a system comprising a guard 14, a power tool 10, a rotation-prevention means comprising a blocking means 31 on a guard side and a stop means 32 on a power tool side, an attachment means 17 for clamping the guard 14 to the power tool 10, wherein the stop means 32 limits

Art Unit: 3723

rotation of the guard 14, wherein the rotation of the guard is independent of a tightening torque to attached the guard 14, wherein the rotation-prevention means limits rotation of the guard 14 to a narrow angular range or entirely prevents rotation of the guard 14, wherein the guard 14 can be fixed to any position in a limiting groove 32, wherein the a collar 12 includes an insertion groove 34 with a limiting groove 32 located at an angle (note Fig. 1-5, paragraph [0035] through [0045]).

5. Claims 24, 25 and 27 are rejected under 35 U.S.C. 102(b) as being clearly anticipated by Rudolf et al (USPN 4,924,635). Rudolf et al discloses a power tool 1 with motor located in housing 3 for driving an insertion tool 6, a rotation-preventing means for preventing the insertion tool from being released in a direction of an operator, the rotation-prevention means including a stop means 30 for a blocking means 31, wherein the stop means projects outward at an angle from the housing 3 (note Fig. 1-2, col. 4, lines 29-60).
